Naveed Raza

Sr. Power BI Developer | Data Analytics & Power BI Professional

Phone: +92 3018219447 | **Email:** nvd.ra87@gmail.com | **LinkedIn**: Naveed Raza | LinkedIn | **Portfolio**: Naveed's Portfolio

Professional Summary

Data Analytics & Power BI Professional with 8+ years of expertise in data modeling, interactive dashboard development, and business intelligence solutions. Skilled in SQL, Power BI, and Power Automate for end-to-end data workflow automation, reporting efficiency, and actionable insights. Hands-on experience with Microsoft Fabric, delivering end-to-end data engineering solutions across Lakehouse, Warehouse, Data Pipelines, and Dataflow Gen2 for unified analytics. Proficient in PySpark for large-scale data processing and transformation, with experience in developing data solutions and automating data workflows. Strong foundation in statistical methods and data-driven decision-making. Previous experience in telecom (RAN performance, RF optimization) enhances adaptability across data-centric roles.

Core Skills

- Microsoft Fabric, Power BI, SQL, Power Automate, PySpark (Data Processing & Transformation)
- Data Engineering ,Pipeline Development, Data Modeling
- ETL, Dashboard Development, Advance DAX, M Language
- Statistical Analysis, Predictive Modeling, Workflow Automation
- Team Leadership, Cross-functional Collaboration

Professional Experience

Dependibot – Senior BI Developer

Oct 2023 – Present

- Designing and implementing strategic Business Intelligence solutions using Power BI, transforming complex business requirements into meaningful insights that enable stakeholders to make data-driven decisions.
- Strong experience in Power BI development, including interactive dashboards, KPI reporting, advanced data modeling, semantic models, drill-through analysis, dynamic reporting, and executive-level visualizations.
- Specialized in transforming raw and complex datasets into actionable intelligence through optimized data models, business-focused metrics, and insightful visualizations.
- Managing end-to-end Power BI projects, including requirements gathering, data preparation, dimensional modeling, DAX development, report design, testing, deployment, and ongoing maintenance.
- Hands-on experience with Microsoft Fabric, developing end-to-end data engineering and analytics solutions using Lakehouse, Warehouse, Data Pipelines, Dataflow Gen2, OneLake, Notebooks, and Power BI within a unified analytics platform.
- Building ETL/ELT and incremental data-loading solutions in Microsoft Fabric, including ingestion, transformation, data validation, orchestration, and Bronze/Silver/Gold-style data architecture.
- Practical experience with PySpark in Microsoft Fabric notebooks for large-scale data transformation, cleansing, enrichment, schema handling, Delta table processing, and preparation of analytics-ready datasets.
- Strong SQL skills, including complex queries, joins, CTEs, subqueries, aggregations, stored procedures, views, data transformation, and troubleshooting across analytical and reporting workloads.
- Experience in SQL performance optimization, including query tuning, indexing strategies, execution efficiency, and optimization of data retrieval for improved BI and reporting performance.
- Integrating data from multiple sources, including SQL databases, Microsoft Fabric, cloud services, APIs, Excel/CSV files, and other enterprise data sources.
- Proficient in DAX, Power Query, and M Language, developing advanced calculations, time-intelligence measures, dynamic KPIs, reusable transformations, and optimized semantic models.

- Optimizing Power BI reports, semantic models, and DAX calculations to minimize report load times and improve overall performance and user experience.
- Implementing and managing Power BI security and governance, including Row-Level Security (RLS), workspace access, sensitivity labels, and controlled distribution of reports and datasets.
- Intermediate experience with Microsoft Power Automate, creating automated and approval-based workflows, notifications, scheduled processes, data-driven flows, and integrations with Microsoft Power BI.

Zong – Executive Data Analytics & Reporting

Jan 2023 – Oct 2023

- Designed and developed Power BI dashboards for the telecom domain, providing actionable insights into network performance, subscriber trends, service usage, revenue, and operational KPIs.
- Developed daily, weekly, and monthly KPI dashboards for management, enabling visibility into business performance, network operations, and emerging trends.
- Built efficient Power BI semantic models and DAX measures to support complex telecom reporting requirements, trend analysis, period comparisons, and KPI monitoring.
- Performed ETL and data transformation using Power Query and SQL, integrating and cleansing data from multiple telecom operational and business data sources.
- Developed interactive and drill-down dashboards allowing users to analyze performance by region, customer segment, product/service, network technology, and reporting period.
- Optimized Power BI data models, DAX calculations, and report performance to efficiently handle high-volume telecom datasets and improve dashboard responsiveness.
- Collaborated with telecom business stakeholders, network/operations teams, and data teams to gather requirements, validate KPIs, identify reporting gaps, and deliver business-focused BI solutions.

Jazz – Expert RAN Performance & Data Analyst

Jan 2019 – Jan 2023

- Power BI Dashboard conceptualization and implementation for easy KPI trouble- shooting.
- Real time monitoring and analysis of nationwide deployed multi-vendor (Huawei, ZTE, and Nokia) network with smart approach by using Tableau Dashboard Creating Excel macros to automate repetitive tasks and improve team efficiency.
- E2E Analysis of degraded KPIs (2G/3G/LTE) to figure out the root cause before engaging pertinent departments.
- Addition to Major KPIs, Packet loss Rate and Transport Layer Failures analysis of daily basis for the sake of user experience improvement Identification of capacity related issues and abnormal traffic trends and provide recommendations for resolution.
- Single point of contact for all type of Radio end complaints and responsible to perform detailed statistical analysis before engaging pertinent team(s) for visits/resolution of operational issues etc.
- KQIs mapping over KPIs to draw actual picture of user experience at City /MBU/ Regional level.
- Compilation of weekly network analysis report for respective regions
- Coordination with different teams to gather information for data visualization.
- Converted charts into Crosstabs for further underlying data analysis using MS Excel

Jazz – Team Lead, RAN Trouble Ticketing Team

Jan 2017 – Dec 2019

- Leading KPIs analyzing and RAN complaint team
- Analyze 2G network coverage Key Performance Indicators (KPIs) on daily basis. For Voice KPI's CSSR, DCR, HOSR, SD DROP RATE, SD and TCH Blocking etc. and Data KPI's like TBF success rate, TDR, Data throughput.
- Analysis of 3G (CS + PS) KPIs like RRC Connection SR, RAB Establishment SR, UL/DL Traffic, CS/PS CSSR, CS/PS DCR, SHO Success rate, UL/DL TP, I-RAT HOSR and Congestion etc.
- 4G KPIs analysis to cater slow throughput issue. KPIs includes RRC Connection Success Rate, ERAB setup Success rate, HO Success rate (HO Preparation Success Rate, HO Execution Success Rate), UL/DL Packet loss, UL/DL TP, PRB Utilization etc.
- Root Cause Analysis of issues on sites with degraded KPIs.

- Raising operational issues of 2G/3G/4G to operation domain
- Thorough KPI analysis of all customer complaints for the identification of issue and escalation to level-2 team for rectification within technology domain. On the other hand, keep customer care/commercial updated with the developments.
- 24*7 availability for any sort of management escalation/area specific complaints to ensure timely coordination with technology teams for complaint resolution.
- Involve in defining process with various departments for better handling of customer complaints and responsible to share weekly performance report with the higher management.

BCS – RAN Trouble Ticketing Specialist

Mar 2015 – Dec 2016

- Responsible for handling corporate customer complaints nationwide. Responsible to arrange drive test and coordination with field teams
- Initial troubleshooting and complaint analysis using Network tools i-e M2000 (Huawei), Net Numen (ZTE), Business Object (Ericsson)
- Responsible for 2G/3G stats analysis of all KPIs and issue escalation to relevant technical teams
- Responsible to handle 2G/3G data complaints
- Responsible to coordinate with commercial division and response the queries raised by them related to network
- Responsible to coordinate with technical/level-II teams and following up technical issues till resolution
- Responsible to arrange technical survey for indoor solutions.
- Performing call traces to check customer's live network quality.

LCC Pakistan – 2G/3G DT Engineer

Jul 2012 – Mar 2015

- Managing LCC-CIII Team on daily basis activities
- Maintaining and improving RF KPIs of assigned clusters. Worst cell identification and escalation for resolution.
- Traffic Analysis, Traffic shifting for Congested Cells Rural & Urban.
- SWAP SSV's Reports Approval (TP-ZTE SDR)
- Preparing recommendation for hard and soft optimization by analyzing DT Reports

Education

MSc – Telecommunication Systems, BZU Multan, 2010
